

EXEL[®]

ISOLATION TRANSFORMER

EXEL Isolation Transformers are used to change the voltage levels. As there is only magnetic coupling between the primary and secondary windings, it acts as an excellent spike and noise filter. The high degree of Isolation and spike suppressor action makes it suitable to generate voltage supplies of required levels for critical load applications. The isolation transformers are available in different voltage and current ratings (Single Phase or Three Phase) as per the client's requirement.

Ishita Electronics
