

EXEL[®]

LINE FILTER CHOKE (LFC)

EXEL Line Filter Chokes are used in series with AC Input lines to control Harmonics and disturbances. Whenever drives are used in control panels, the spikes and harmonics are generated due to switching in drives. These harmonics disturb the other equipments connected to AC mains lines. If there is long distance between the control panel and motors, it may cause disturbance on supply voltage. Line Filter Chokes are used to reduce Harmonics and filter the disturbances on the line. These chokes are available in various ratings as per the current and inductance requirements of the customer.
